Security without compromise

The increasingly distributed workforce and acceleration to the Cloud make network access, speed and simplicity of topology a truly complex challenge for businesses looking to adapt their security posture to the new 'cloud first' requirements.

SASE converges network performance with security needs in the cloud to deliver seamless, secure access to applications - no matter where the user is located.

The model aims to bring all the functions together into one, fully integrated Cloud based service.

Core functions include:

- SD-WAN
- Secure web gateway
- Firewall as a service
- Cloud access security broker
- Zero-trust network access
- Performance monitoring from end user to application

Solving connectivity, security and access to data

Network

Connect users to the apps and data needed - in any environment, from anywhere

- ✓ System updates
- √ Vendor support
- Extend SD-WAN fabric into the Cloud

SASE

Security Access Service Edge

- ✓ Integrated Solutions
- ✓ Managed Service bundles
- ✓ Streamline policy creation and management

Security

Control access and enforce the right security protection consistently

- ✓ Cloud Security
- ✓ Zero trust network access
- ✓ Secure web access
- ✓ Trusted devices

Business drivers

- A desire to connect your workforce effortlessly to applications in any environment from any location
- Requirement to control access through a simplified, cloud-based security service
- A need to unite networking and security functions
- A desire to connect your workforce effortlessly to applications in any environment from any location
- A need to unite networking and security functions

Business benefits

Every organisation has different architectures, business goals and investments. SASE allows organisations to move away from purchasing various point-products to secure different parts of their networks and adopt a more operational process.

The benefits of adopting a SASE model are also truly unlocked when you work with a single partner who can manage and have full visibility of your network and security requirements.

Beyond network security - other business benefits

- Specifically designed to support Cloud-first initiatives for business applications in particular for those members of staff who are working remotely
- Enables digital innovation by ensuring business continuity in constantly changing environments
- Helps deliver reliable security capabilities across dispersed networks and remote workforces
- Allows control of capital expenditures
- Creates an enhanced user experience
